

Work Status of Employed Persons, 2016, London CMA

For London CMA
20.4 % part-time
79.6 % full-time

Sources: Leger Marketing, Survey of Non-Standard Work, London Ontario (N=796)

& Statistics Canada, Canadian Labour Force Survey, London CMA and Custom Tabulations

The above pertains exclusively to “currently employed” Londoners.

Statistics Canada estimates that roughly 1 in 4 Londoners of working age are not currently employed, i.e. are either currently unemployed or have withdrawn from the Labour Force altogether (report that they are not looking for work).

If we consider all Londoners of working age (regardless of whether or not they are currently employed), the above figure drops from 50.2 per cent of all “employed persons” in standard employment down to only about 38 per cent of all Londoners of working age, regardless of whether or not they are currently employed.
