

Percentage of persons employed in non-standard employment, London, 2016

Sources: Leger Marketing, Survey of Non-Standard Work, London Ontario (N=796)
& Statistics Canada, Canadian Labour Force Survey, London CMA and Custom Tabulations

Note: The above categories are not mutually exclusive & subsequently overstate the proportion of Londoners who do not have standard employment. In particular, Statistics Canada’s estimate of part-time employment (20.4 per cent) includes some who can also be classified as working in temporary jobs or being self-employed.
